Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Protective gloves that meet the criteria of BS EN 374.

Check protective gloves prior to each use for their proper condition.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

After use of gloves apply skin-cleaning agents and skin cosmetics.

· **Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Do not allow product to reach ground water, water course or sewage system.
 Danger to drinking water if even small quantities leak into the ground.
 Rinse off of bigger amounts into drains or the aquatic environment may lead to increased pH-values.
 A high pH-value harms aquatic organisms. In the dilution of the use-level the pH-value is considerably reduced, so that after the use of the product the aqueous waste, emptied into drains, is only low water-dangerous.

SECTION 13: Disposal considerations

· 13.1 Waste treatment methods

If possible, reuse the product (pay attention to shelf life and storage conditions). Prevent release into the environment and sewage system. In case of disposal, solidify it with sand and dispose of it as mixed construction waste or as waste paint.

· Recommendation

Before washing brushes, rollers or other tools with water, mechanically remove as much paint residue as possible. Cleaning tools under running water is not recommended. Instead, we recommend cleaning in a container with water, which is then left to stand. Once the paint settles, the clear water can be reused, and the sediment should be disposed of as waste paint. Prevent discharges into drains and the environment.
